SYDNEY – 8 MAY 2018

This seminar will assist contaminated landowners, environmental professionals based in industry and new entrants to environmental management on recent changes and developments in the contaminated land management.

The proposed Remediation of Land SEPP is a key focus of this seminar as it contains a tightening of the triggers for Cat 1 remediation works; those requiring Development Approvals. The SEPP 55 replacement proposes to use Certified Contaminated Site Practitioners as the assessors in determining if a site remediation triggers a Cat 1 or a Cat 2 classification and validate Cat 2 was done correctly. The proposed SEPP and Contaminated Land Guidelines are a work in progress and many of the issues raised and discussed at the seminar should assist in improving from the draft.

Also discussed are the ongoing emerging pollutants of PFAS and asbestos and the issues they bring to contaminated land management. The National Environment Management Plan on PFASs will be discussed and what its implications mean for contaminated site investigations and remediation works. This seminar will cover:

- ✓ Update on the progress of the review of SEPP 55
- ✓ A legal review of the proposed SEPP 55 changes and their impacts on remediation
- ✓ PFAS management following national guidance on this subject for contaminated sites
- ✓ A contractor's perspective on planning issues and dealing with PFAS sites
- ✓ Use of auditors and or practitioners for managing medium risk level remediation
- ✓ Disposal/destruction of PFAS wastes: where, what is involved and preparations
- ✓ Historical mapping of contamination shows issues not confined to just industrial land
- ✓ Managing contaminated PFAS and asbestos soils under NSW's waste legislation

Details at a glance

Date: Tuesday, 8 May 2018

Time: 8:55 am – 4:40pm; Registration from 8:40am.

Venue: Baker McKenzie's Rooms, T1, L46, 100 Barangaroo Ave, SYDNEY
